

Global Challenges for District Heating and Cooling

Sven Werner
Professor at
Halmstad University, Sweden

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

1

To be discussed

0. Introduction

The four global challenges for District Heating and Cooling (DHC):

1. Obtaining full recognition of the DHC benefits within the global warming context
2. Introducing new non-fossil heat sources
3. Harmonizing the district heating technology with lower future heat demands
4. Introducing an enhanced district heating technology for meeting the future market conditions

Conclusions

15th DHC Symposium, Seoul, Sept 5, 2016

4

0. Introduction

DHC is small in global energy use

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

5

0. Introduction

EU28 during 2012, Proportions of heat supply for heat demands in residential and service sector buildings

Total heat supply was 11.0 EJ for 507 million inhabitants, not including indirect heat supply from all indoor electricity use

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

6

0. Introduction

Heat supply to Swedish buildings

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

7

0. Introduction

European space cooling demands

- Currently, about 700-900 PJ cold are annually used in European residential and service sector buildings
- European district cooling systems delivers about 10 PJ annually
- Hence, the market share for district cooling is about above one percent

Challenge 1

RECOGNITION

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

9

1. Recognition

Recent recognition actions

UNEP action:
District Energy in Cities

European Commission:
An EU Strategy on Heating and Cooling

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

10

1. Recognition

Further recognition actions

- Communicate the fundamental idea of district heating (heat recycling)
- Communicate district heating and cooling as useful tools for combating climate change
- Facilitate efficient planning of district heating and cooling (Heat Roadmap Europe as example)

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

11

1. Recognition

Basic heat flows in current district heating systems

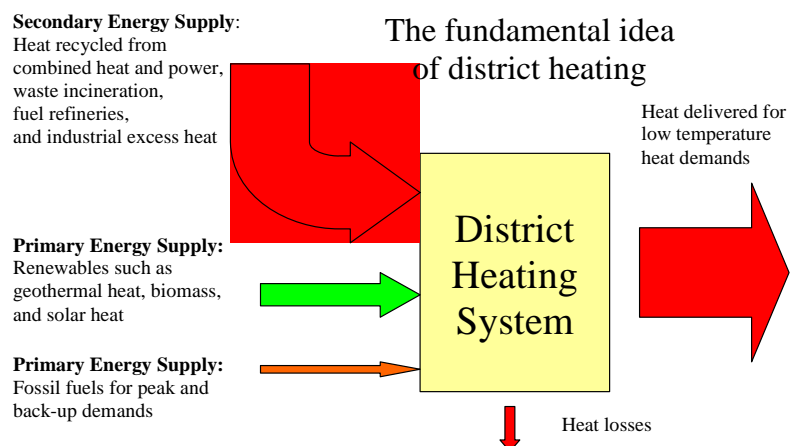

Figure 2-1. The basic energy flows in a district heating system designed according to the fundamental idea.

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

12

1. Recognition

IPCC has not yet fully identified DHC as efficient tool for combating climate change

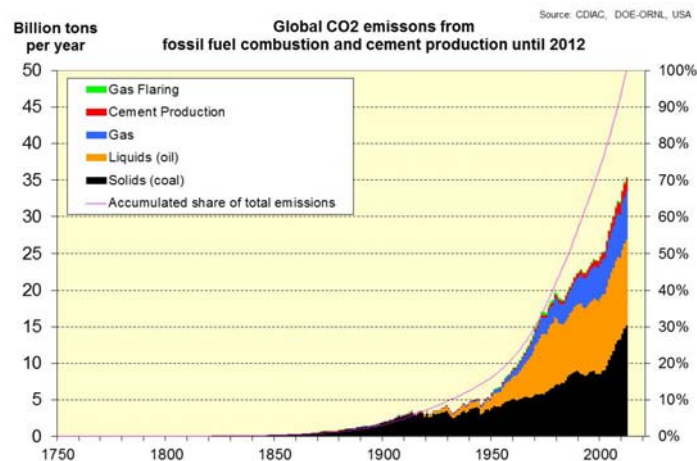

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

13

1. Recognition

World carbon dioxide emissions from energy supply

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

14

1. Recognition

Specific carbon dioxide emissions from the Swedish district heating systems

1. Recognition

Heat Roadmap Europe projects

- 1st Heat Roadmap Europe pre-study 2012 about the future conditions for district heating in a business-as-usual scenario. Benefit of lower costs with 14 billion EUR in 2050.
- 2nd Heat Roadmap Europe pre-study 2013 about the future conditions for district heating in a strong energy efficiency scenario. Benefit of lower costs with 100 billion EUR in 2050.
- Stratego – HRE3, European project between 2014 and 2016 with several partners. Detailed studies of five European countries.
- Heat Roadmap Europe 4, European project between 2016 and 2018 with several partners. Detailed studies of further ten European countries.
- Outputs and corresponding maps are available at www.heatroadmap.eu

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

16

1. Recognition

Main results from Heat Roadmap Europe

- A. Forecast:** District heating will be suitable in dense urban areas, while local heat pumps and biomass boilers will be suitable in other areas.
- B. News:** First ever estimation of the district heating benefits in the future European energy system.
- C. Less costly:** We can avoid the most expensive end use energy efficiency measures in buildings by using district heating as an energy efficiency tool.
- D. Paradox:** District heating will have a higher competitiveness in a future more energy efficient Europe.

Heat Roadmap Europe methodology

We sliced EU into about 1300 pieces (NUTS3 regions), and estimated what was possible in each region.

Other energy modellers just cut EU into 27 pieces (the national energy balances)

Figure 11: The NUTS3 regions of Europe, of which 1289 are located within the EU27 European territory and 14 are located overseas. (from the second pre-study)

District Heating

Figure 12-2. Map showing district heating systems in Europe in 2011. Systems have identified in 2779 cities and towns having more than 5000 inhabitants. Further 1395 district heating systems have been found in smaller towns and villages, mostly in Denmark, Sweden, Switzerland, Austria, the Czech Republic, and the Slovak Republic. According to national statistics, further about 1500 systems are in operation. Source: The European DHC database at Halmstad University (Urban Persson).

33

2. New heat sources

Solar district heating in Denmark

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

34

2. New heat sources

Vojens, Denmark

Construction of
the large
thermal storage
during 2014

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

35

2. New heat sources

Other future heat sources

- Large data centres (Stockholm, Helsinki, Mäntsälä, Viborg etc.)
- Large heat pumps (Sweden - sewage, lake, or sea waters)
- Large electric boilers (Denmark/Germany - taking care of surplus wind power)
- Local heat sources as bakeries, air conditioning chillers, electric transformers etc.

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

36

Challenge 3

LOWER HEAT DEMANDS

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

37

3. Lower heat demands

Current temperature demands

- Fossil fuel resources can easily deliver the high temperatures required to distribute heat to buildings with high heat demands
- Hence, the current district heating technology was once developed for fossil based heat supply and for buildings with high heat demands

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

38

3. Lower heat demands

Future temperature demands

- Renewables, heat recycling, and heat storage becomes more efficient when the temperature demands is lower
- Buildings with lower heat demands requires lower temperature demands
- Hence, lower heat demands is a possibility to obtain more efficient district heating systems.

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

39

3. Lower heat demands

Conclusion, temperature demands

**The current high distribution temperatures
in district heating networks
are major barriers for introducing
renewables, heat recycling,
and large heat storages**

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

43

4. Enhanced technology

The five abilities of 4GDH

1. Ability to supply low-temperature district heating for space heating and hot water
2. Ability to distribute heat in networks with low grid losses
3. Ability to utilise renewable heat and recycled heat from low temperature sources
4. Ability to be an integrated part of smart energy systems
5. Ability to ensure suitable planning, cost and motivation structures

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

44

Conclusions

The global DHC community must:

1. Communicate the DHC benefits to all global policymakers
2. Use new heat sources
3. Harmonize the district heating technology for lower heat demands
4. Develop the fourth generation of district heating technology

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

45

One fact and five dreams

Russian carbon dioxide emissions will be small!

Very welcome to my district heated house!

I prefer district heating pipes of this size!

USA will spend more money on DHC!

China and Russia agree that DHC is a sustainable solution!

Let us pray for DHC !

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

46

District heating dreams

These six world leaders live and work in buildings connected to district heating systems!

USA will spend more money on DHC!

China and Russia agree that DHC is a sustainable solution!

Let us pray for DHC !

06/09/2016

15th DHC Symposium, Seoul, Sept 5, 2016

47

The End

Thank you for your attention!
